Yosr Taktak

Software Engineering Student | DevOps & Cloud Enthusiast

Final-year student, graduating June 2027 — seeking a 6-month Cloud / DevOps / SRE internship starting between February and April 2027, open to relocation in Europe

Sfax, Tunisia • +216 27 032 706 • yosrtaktak6@gmail.com • linkedin.com/in/yosrtaktak • github.com/yosrtaktak

Professional Summary

Final-year Software Engineering student who recently designed and validated, through chaos experiments, a full detect → diagnose → remediate reliability loop on Kubernetes during a DevOps/SRE internship: SLO-based alerting, chaos engineering, GitOps and on-call automation on a microservices platform. Currently developing Cloud skills (AWS) through coursework and infrastructure-as-code projects, and looking to deepen this into production-grade Cloud engineering experience. Seeking a 6-month Cloud/DevOps/SRE internship within an experienced platform or infrastructure team.

Professional Experience

Jun 2026 – Aug 2026

DevOps & Site Reliability Engineering Intern — *BePrimeTech, Sfax, Tunisia*

Production-readiness and reliability platform for an 11-microservice e-commerce application on K3s.

- Provisioned the K3s cluster with Terraform and hardened the deployment (Kustomize, Istio Ambient with strict mTLS, default-deny authorization policies, PDBs, tuned resource limits); packaged the observability stack (Prometheus, Grafana, Loki, Tempo, OpenTelemetry, Kiali) as a single Helm chart with 5 dashboards provisioned as code.
- Defined 5 SLOs (99%–99.95%) on user-centric SLIs measured at the mesh L7 layer, and implemented multi-burn-rate alerting (Google SRE Workbook): 16 alerts, 8 inhibition rules, Slack routing by severity.
- Designed and ran 8 LitmusChaos experiments (Argo Workflows): detection in 2–3 min (critical) and 5–7 min (warning), no false positives observed in a negative-control run; found, fixed and re-tested 2 monitoring blind spots.
- Migrated the stack to 6 Argo CD applications with selfHeal to limit configuration drift; supported CI/CD (GitHub Actions) with SAST, secret, dependency and image scanning (Trivy, CodeQL, Gitleaks).
- Built vendor-neutral incident management (GoAlert, ntfy, Slack war room with ChatOps, incident database; MTTA of 3 min 17 s in a live on-call simulation) and a read-only, alert-triggered AI incident investigator (HolmesGPT, Gemini, Qdrant RAG) that diagnosed incidents such as a network loss invisible to Kubernetes; AI-proposed fixes go only through human-reviewed pull requests.

Stack: Linux, Docker, Kubernetes (K3s), Istio Ambient, Helm, Kustomize, Terraform, Argo CD, Prometheus, Alertmanager, Grafana, Loki, Tempo, OpenTelemetry, Kiali, LitmusChaos, Argo Workflows, GoAlert, ntfy, Slack, HolmesGPT, Gemini, Qdrant, GitHub Actions, Trivy, CodeQL, Gitleaks, Python, Bash

Feb 2025 – Jun 2025

Full-Stack Developer — *Software Automation for Medical Employment, Tunis*

Collary — platform matching recruitment agencies, healthcare facilities and medical professionals, France.

- Delivered features on an Angular / Spring Boot / MySQL platform for French recruitment agencies and healthcare facilities.
- Built interfaces for availability management and automated mission assignment; integrated third-party APIs (push, email, SMS) and contributed to the CI pipeline (GitHub Actions).

Stack: Angular 17, Spring Boot, Java 17, MySQL, REST APIs, GitHub Actions, Agile Scrum

Feb 2024 – May 2024

Full-Stack Developer Intern — Final-Year Project — *IT SERV, Sfax, Tunisia*

Task and timesheet solution — work-time tracking, multi-project coordination, automated report validation (3 Scrum sprints).

- Secured and decoupled the platform: Spring Boot microservices (Eureka, API Gateway, Config Server), Spring Security role-based access.
- Centralized time tracking: daily work-time entries (imputations) per project activity, validated via monthly reports with email alerts, plus annual/monthly dashboards: admins track work per project and per task, employees their own work per project.

Stack: Angular 17, Spring Boot, Spring Security, Java 17, PostgreSQL, Eureka, API Gateway, Config Server, Hibernate, Postman, Scrum, UML

Jul 2023 – Aug 2023

Network Monitoring Intern — *New Engineering IT, Sfax, Tunisia*

Network supervision across a heterogeneous server estate — Zabbix monitoring platform.

- Deployed a Zabbix server (Ubuntu VM, MySQL) monitoring Windows, Linux and web servers via native agents and SNMP.
- Set up e-mail alerting (SMTP/TLS, triggers, severity levels), custom dashboards and a network map with failure indicators.

Stack: Zabbix, Linux (Ubuntu), Windows Server, VMware, SNMP, SMTP, alerting

Technical Skills

Cloud: AWS — Cloud Practitioner Essentials course completed (not certified) and hands-on use via IaC projects; actively deepening

Linux & Systems: Linux (Ubuntu), Bash scripting, Windows Server, VMware, SNMP

DevOps & CI/CD: GitHub Actions, GitLab CI, GitOps (Argo CD), Terraform (IaC), DevSecOps basics (SAST, secret/dependency/image scanning, Trivy, CodeQL, Gitleaks, SBOM, Cosign)

Containers & Kubernetes: Docker, Kubernetes (K3s), Helm, Kustomize, Istio (service mesh, mTLS)

Observability & SRE: Prometheus, PromQL, Grafana, Loki, Tempo, OpenTelemetry, Alertmanager, Kiali, Zabbix, SLI/SLO and burn-rate alerting, chaos engineering (LitmusChaos), incident management (GoAlert, ntfy)

Programming: Java 17, Python, TypeScript, JavaScript, SQL, Bash, YAML

Backend & Databases: Spring Boot, Angular 17, Node.js, REST APIs, PostgreSQL, MySQL, MongoDB

Tools & Methods: Git, GitHub (github.com/yosrtaktak), GitLab, Jira, Agile Scrum

Languages: Arabic (native), French (fluent, C1), English (professional, B2)

Education

Sep 2024 – Jun 2027

National Engineering Degree in Computer Science — *International Institute of Technology, Sfax*

Software Engineering & Decision-Support Systems — graduation expected June 2027.

- Retail ERP project (Next.js 14, TypeScript, Prisma, PostgreSQL): stock batch logic, audited stock movements, scheduled alerting with Firebase push, JWT roles, POS and analytics UI.
- Decision-support platform, team project (SQL Server, ETL/SSIS, OLAP cube/SSAS, React, FastAPI): automated data pipeline, analytics dashboards, sales forecasting and a local-LLM assistant (Ollama).

Sep 2021 – May 2024

Bachelor's Degree in Computer Science — *ISIMS, Sfax*

Higher Institute of Computer Science & Multimedia — Big Data & Data Analytics.
